According to our (Global Info Research) latest study, the global Inflated Radome market size was valued at US\$ 98 million in 2024 and is forecast to a readjusted size of USD 133 million by 2031 with a CAGR of 4.1% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

An inflated radome (also called air-supported radome) is a pressurized, flexible structural enclosure that protects radar and antenna systems while maintaining electromagnetic transparency. These structures use continuous air pressure to maintain their shape and provide environmental protection without rigid supports. Inflated radomes offer advantages in mobility, cost-efficiency, and rapid deployment compared to traditional rigid radomes.
