## Abstracts

According to our (Global Info Research) latest study, the global Information-Centric Endpoint and Mobile Protection market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Information-centric security products focus on content, more than device, and apply encryption and authentication to block file access and movement from unauthorized people or circumstances. Endpoint systems are porous, mistakenly sharing data is easy, and users can be careless. Information-centric security is the last line of defense for data when firewalls, anti-malware tools, best practices and other traditional defenses fail. The scope of this market is the protection of stored information, commonly referred to as data at rest. The protection of data at rest in some ways takes precedence, because the interconnectedness of today's systems often undermines network protections. In other words, high-value information should be protected "at rest" to prevent the risk of a breach caused by an unexpected data in motion event.
