The global Infotainment Display Control Modules market size is expected to reach \$ 27731 million by 2032, rising at a market growth of 8.7% CAGR during the forecast period (2026-2032).

In 2025, global Infotainment Display Control Module output reached about 250 million units and global capacity of around 320 million units. The average price is about USD 60 per unit, with gross margins near 34%. Infotainment Display Control Modules (IDCMs) are integrated electronic control units (ECUs) in modern vehicles that manage and process visual content displayed on in-vehicle screens, including center stack touchscreens, digital instrument clusters, and passenger displays; they combine high-performance processors (SoCs), graphics processing units (GPUs), memory (DRAM/NAND), display interface ICs (e.g., LVDS, eDP), operating systems (Android Automotive, QNX, Linux), and connectivity modules to deliver functions such as navigation, media playback, vehicle settings, and advanced HMI/UX features. The supply chain begins upstream with semiconductor vendors (e.g., automotive-grade SoCs, display drivers, memory), PCB and electronic component suppliers (capacitors, power management ICs), and display panel manufacturers (LCD/OLED); midstream consists of Tier 1 automotive electronics suppliers who design, integrate, and manufacture the modules (hardware + embedded software + system validation), often in collaboration with OEMs and software providers; downstream, automotive OEMs install these modules into vehicles and integrate them with broader vehicle networks (CAN, Ethernet) and cloud ecosystems, while aftersales services include software updates (OTA), diagnostics, and maintenance, forming a tightly coupled hardware?software?automotive value chain driven by increasing demand for digital cockpits and intelligent connected vehicles.
