An infrared asphalt heater is a specialized piece of equipment that uses infrared radiation to heat asphalt materials. This technology provides efficient and precise heating, making it a valuable tool in road construction and repair.

Infrared asphalt heaters emit infrared radiation, which is a type of electromagnetic radiation that can penetrate materials and convert into heat energy. When directed at asphalt, the infrared radiation is absorbed by the material, causing it to heat up quickly and evenly. This rapid heating allows for efficient melting and shaping of the asphalt.
