## Abstracts

The global Infrared Body Temperature Detector market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Infrared body temperature detectors are another form of light detector that are triggered by heat energy emitted by an intruder's body. This detector does not respond to changes in room temperature, either rising or falling. But when a target with a temperature approximately equal to the human body temperature (such as an intruder) enters a non-sensitive area from a sensitive area, the alarm can detect the difference in radiation and trigger an alarm.

This report studies the global Infrared Body Temperature Detector production, demand, key manufacturers, and key regions.
