## Abstracts

The global Infrared Filters market size is expected to reach \$ 4528 million by 2032, rising at a market growth of 15.4% CAGR during the forecast period (2026-2032).

IR filter commonly refer to filters that reflect or block mid-infrared wavelengths while passing visible light. The infrared filter exists in various specifications and forms for a multitude of applications. Infrared filters can be designed in bandpass, longpass, and shortpass configurations for applications in the SWIR, NIR, and MIR wavelength bands. Low stress coatings with high blocking in the visible are afforded by incorporating high index semiconductors in the designs.
