The global Infrared Gas Transmitter market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Infrared gas transmitter is a device used to detect and measure gas concentration. It is based on the principle of infrared absorption, and determines the gas concentration by detecting the degree of absorption of infrared light of a specific wavelength by gas molecules. Infrared gas transmitters are widely used in gas monitoring and safety control in industrial environments. They can detect a wide variety of gases such as methane, carbon dioxide, ammonia, and more. Due to the advantages of fast response, high sensitivity, and good stability, infrared gas transmitters are widely used in industrial process control, environmental monitoring, fire detection, and safety systems.
