Infrared light desktop turbidimeter is an instrument used to measure the concentration of suspended particulate matter in water. It uses an infrared light source and receiver to determine the turbidity value by measuring the scattering and absorption of infrared light by particles in the water. The infrared light desktop turbidimeter usually includes a measuring head and a display screen, which can measure the water sample through the measuring head and display the result on the screen. The instrument is widely used in water treatment, environmental monitoring, drinking water quality testing and other fields. It can quickly and accurately measure the turbidity value in water and provide an important reference for water quality analysis.
