## Abstracts

The global Infrared Quantum Cascade Laser market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Infrared quantum cascade lasers are based on quantum cascades and consist of multiple quantum wells connected in series, each of which is composed of different semiconductor material layers. Through appropriate energy band design and material selection, electrons can undergo energy level cascade transitions when passing through quantum wells, thereby realizing the emission of photons. The development of infrared quantum cascade laser provides an important light source for the application of infrared technology. Its high power, high efficiency and tunability make it have broad application prospects in various fields.

The infrared quantum cascade laser is a special type of laser, which is mainly used to emit the laser light in the infrared band. It is based on the quantum cascade technology, which has the advantages of high efficiency, miniaturization and tunability.
