The global Infrared Thermal Imaging Temperature Measurement Modules market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Infrared thermal imaging temperature measurement modules, also known as thermal cameras or thermal imaging modules, are devices that use infrared radiation to detect and measure the temperature of objects or surfaces without direct contact. These modules consist of an array of infrared sensors that detect the heat emitted by objects, converting it into an electrical signal. A thermal image is then generated based on the detected radiation, showing variations in temperature as different colors or shades.
