According to our (Global Info Research) latest study, the global Infrared-Transmitting Optical Glass market size was valued at US\$ 350 million in 2025 and is forecast to a readjusted size of US\$ 582 million by 2032 with a CAGR of 8.0% during review period.

In 2025, global production of infrared-transmitting optical glass reached 233.36 tons, with an average selling price of US\$1,457 per kilogram. Global annual production capacity for infrared-transmitting optical glass was approximately 373 tons, with a gross profit margin of approximately 30.2%. Infrared optical glass (IR optical glass) is a type of glass material with excellent optical properties in the infrared band (typically referring to wavelengths from approximately 0.78 micrometers to several hundred micrometers, with common operating ranges such as 1?5 ?m and 2?20 ?m). It is used to manufacture optical components in systems such as infrared imaging, infrared observation, night vision, thermal imaging, and spectral analysis, such as lenses, lens groups, prisms, and filters. The upstream of the infrared-transmitting optical glass industry chain includes quartz sand, calcium carbonate, and zinc sulfide, the midstream consists of infrared-transmitting optical glass manufacturers, and the downstream mainly comprises industries such as military defense, security systems, and automobiles.
