Abstracts

The infusion central monitoring system uses wireless data transmission to read the operating data of multiple infusion pumps, syringe pumps, and nutrition pumps at the same time. The terminal uses graphics to display the operating status of each infusion pump, syringe pump, and nutrition pump. The nurse can do it at the nurse workstation. Check the operating status of each infusion pump, syringe pump, and nutrition pump at any time. When the infusion pump, syringe pump, or nutrition pump generates an alarm, the terminal will display it immediately and give a sound to remind the operator to deal with it.
