## Abstracts

The global Infusion Labeling Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The infusion labeling machine is a device used in the medical field to identify and record the information of infusion bottles or bags. It usually consists of a machine and corresponding software system. The infusion labeling machine can automatically obtain information including drug name, dose, production date, expiration date, etc. by scanning the barcode or QR code on the infusion bottle or bag, and print this information on the corresponding label. These labels can be affixed to infusion bottles or bags, so that medical staff can accurately identify and monitor the use of drugs during infusion. The use of the infusion labeling machine can improve the safety and efficiency of the infusion process, and reduce errors and confusion that may occur in manual operations. It can help medical institutions realize the automation and informatization of drug management, improve medical quality and patient safety.
