Abstracts

An infusion pump is a medical device that is used in healthcare facilities to provide control, accuracy, and precision in the delivery of fluids such as drugs, nutrients, and blood to patients during treatment. Infusion pumps should deliver the fluids at a proper rate and dose to avoid complications.

Scope of the Report:

This report focuses on the Infusion Pump in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. On the basis of end user, the infusion pumps market is segmented into hospitals, home care settings, ambulatory care settings, and academic & research institutes. The hospitals segment dominated the market in 2017. The large share of this end-user segment is mainly attributed to the strong financial capabilities of hospitals for purchasing high-priced infusion devices, large patient pool, and the availability of trained professionals to operate infusion pumps.

In 2017, North America accounted for the largest share of this market. However, the Asia Pacific region is expected to witness the highest CAGR during the forecast period of 2018 to 2023. Factors such as the rising geriatric population, growing incidence of chronic diseases, increased accessibility to advanced healthcare facilities, rising healthcare spending, rapidly improving health insurance sector, growing demand for advanced technologies, and expansion of private-sector hospitals to rural areas are fueling the demand for infusion devices in the APAC region. However, frequent product recalls of infusion pumps, stringent regulatory requirements for new products, and the increasing adoption of refurbished infusion pumps are restraining the growth of this

market to a certain extent.

The worldwide market for Infusion Pump is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
