Keratin is a structural protein that connects epithelial (skin) cells together and protects them from environmental damage. However, keratin itself is insoluble and is poorly absorbed in the body. Hydrolyzed keratin is keratin protein that has been broken down into smaller molecules and is readily absorbed in the body when consumed orally. Ingestible Keratin can be combined with other ingredients. It can be formulated into capsules, tablets, candies, gums, functional foods and beverages and more. It can also be used in animal health products.
