## **Abstracts**

Ingestible sensors is an innovative technologically advanced product of digital medical industry. Ingestible Sensors are pills that have the ability to detect various bodily functions and activities, medication check, heart rate and blood pressure.

### **SCOPE OF THE REPORT:**

This report focuses on the Ingestible Sensor in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. North America currently dominates the ingestible sensors market. As treatment procedures using ingestible electronic pills are highly effective and minimally invasive, physicians prefer the use of ingestible sensor technology. In North America, the field of endoscopy has witnessed significant technological advancements over the past few years such as the development of advanced wireless minimally invasive capsule endoscopes.

The Asian market is characterized by the presence of a large population base and high incidence of target diseases. In the APAC ingestible sensors market, established players from various product segments are following the push strategy, which enables them to make their ingestible electronic pills available in this region. Japan, China, and India represent the next promising hubs for the development of ingestible sensors technology-based devices.

The worldwide market for Ingestible Sensor is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
