## Abstracts

Inhalation anesthetics are used to induce and maintain general anesthesia while performing surgical procedures. Inhalation anesthetic agents are administered through masks or tracheal tubes. These agents get perfused into blood through alveoli and transported to central nervous system where these induce anesthesia.

According to our (Global Info Research) latest study, the global Inhalation Anesthesia market size was valued at USD 1161.5 million in 2022 and is forecast to a readjusted size of USD 1421.8 million by 2029 with a CAGR of 2.9% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Inhalation anesthesia has an advantage over other intravenous agents and is considered safer by surgeons. Rising adoption of these drugs in major markets such as U.S., Europe, and Japan is expected to drive revenue growth.
