Inhibited ethylene glycol fluids are specialized heat transfer fluids designed for use in industrial and HVAC systems to prevent freezing and overheating. These fluids consist of ethylene glycol combined with corrosion inhibitors, which protect metal surfaces in pipes and equipment from rust and degradation. The inhibitors enhance system longevity and efficiency, making these fluids ideal for applications such as cooling systems, refrigeration units, and geothermal systems. Inhibited ethylene glycol fluids are widely used in industries like chemical processing, food and beverage, and power generation, where thermal stability and corrosion protection are critical.
