Injectable anchoring epoxy resin is a high-strength chemical anchoring material specially used in the construction and engineering fields. It is usually used to fix fasteners such as steel bars, bolts, screws, etc. to substrates such as concrete, masonry or rock. It fills the pre-drilled holes with epoxy resin by injection, and then inserts the anchor to be fixed. During the curing process, the resin will be closely combined with the substrate and the anchor to form a strong bonding force and mechanical locking force, thereby providing a highly stable and lasting anchoring effect.
