## Abstracts

According to our (Global Info Research) latest study, the global Injection Robot market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A Injection Robot is a kind of cartesian coordinate robot whose three principal axes of control are linear (i.e. they move in a straight line rather than rotate) and are at right angles to each other. The three sliding joints correspond to moving the wrist up-down, in-out, back-forth. Among other advantages, this mechanical arrangement simplifies the Robot control arm solution. Cartesian coordinate robots with the horizontal member supported at both ends are sometimes called Gantry robots; mechanically, they resemble gantry cranes, although the latter are not generally robots. Gantry robots are often quite large.

Injection Robot is applied on 100-500T machines and further processing systems.

The Global Info Research report includes an overview of the development of the Injection Robot industry chain, the market status of below 100T (Servo Robot, Pneumatic Robot), 100-500T (Servo Robot, Pneumatic Robot), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Injection Robot.
