Abstracts

The global Ink Paste market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Red ink paste is the pigment that sticks to the bottom of the stamp when using the stamp, usually red. Traditional ink pads are made by mixing finely ground cinnabar (mercury sulfide) into refined rapeseed oil, and then mixed with moxa. Some high-end ink pads are mixed with shredded lotus root. Modern commercially available ink pads are mostly prepared with chemical pigments, and the ink can also be injected into the countertops made of cotton cloth, collodion, etc. instead of adding moxa.
