According to our (Global Info Research) latest study, the global Ink Resins market size was valued at USD 2571.8 million in 2023 and is forecast to a readjusted size of USD 3302.3 million by 2030 with a CAGR of 3.6% during review period.

Ink resins are generally used in the production of printing inks. They are used in ink pigments and dispersion of the inks to change the physical and chemical properties of ink. The most significant properties that ink resins should possess are stability, good surface appearance, glossy finish, flow, solvency, and dilatibility. Resins are a part of the composition of printing inks. Resins are used depending upon the type of ink technology, printing system, and the end-user applications.

Currently, the Asia-Pacific region is the largest consumer of ink resins and is estimated to grow at the highest CAGR. The countries such as China, Japan, and India is expected to lead the Asia-Pacific ink resins market, with China having the largest share in the regional volumetric consumption of ink resins. The market volume of ink resins is comparatively low in the RoW region, but the estimated growth for the region is second highest after Asia-Pacific.
