According to our (Global Info Research) latest study, the global Ink Screen Electronic Conference Table Sign market size was valued at US\$ 258 million in 2025 and is forecast to a readjusted size of US\$ 505 million by 2032 with a CAGR of 10.1% during review period.

In 2025, the global production of Ink Screen Electronic Conference Table Sign reached approximately 2 million units, with an average global market price of around US\$50-\$300 per unit. In the same year, the global total production capacity of Ink Screen Electronic Conference Table Sign reached 2.51 million units. The industry average gross profit margin of this product reached 25%-35%. Ink Screen Electronic Conference Table Signs are intelligent display devices used in conference rooms, offices, and exhibitions. They utilize e-ink (E-Ink) technology to display text, icons, or QR codes, and can show meeting agendas, attendee names, department information, or interactive content. Compared to traditional paper nameplates, their advantages include low power consumption, long display time without continuous power supply, convenient information updates, ease of management, and environmental friendliness. They are widely used in corporate meetings, government agencies, hotel conference rooms, exhibitions, and remote collaboration scenarios.

The Ink Screen Electronic Conference Table Sign industry chain mainly includes upstream e-ink screen and driver chip manufacturers, control system and wireless communication module suppliers; midstream OEM design and manufacturing companies; and downstream system integration and channel sales. Furthermore, software platforms and cloud management systems are also core components, used for information dissemination, unified management, remote updates, and data analysis,

thus forming a complete ecosystem of 'hardware + software + services.'

With the upgrading of enterprise digital offices, the promotion of green environmental protection concepts, and the increasing demand for smart conference rooms, the Ink Screen Electronic Conference Table Sign market is showing a stable growth trend. Its advantages of low power consumption, sustainable updates, and remote management enable enterprises to gain significant value in meeting room management, improved meeting efficiency, and collaboration during travel or in multiple locations. In the future, as the cost of e-ink technology decreases, display quality further improves, and it becomes more deeply integrated with meeting management systems, IoT, and office automation platforms, this market is expected to gradually expand from traditional nameplate replacements to a core component of smart meeting solutions, while its penetration rate in government, finance, healthcare, exhibitions, and international conferences will continue to increase.
