Abstracts

The global Inkjet Inks for Industrial Printing market size is expected to reach \$ 7132 million by 2032, rising at a market growth of 6.2% CAGR during the forecast period (2026-2032).

In 2025, global sales volume for Inkjet Inks for Industrial Printing reached 186,000 metric tons, with an average selling price of \$24,500 per ton. Total global production capacity stands at approximately 240,000 tons per year, and the industry's average gross profit margin is around 34%. These inks are functional liquid materials designed for industrial-grade inkjet systems, enabling the digital deposition of high-precision images, text, and functional layers onto substrates such as paper, plastic, metal, glass, ceramics, textiles, and packaging materials. Composed primarily of colorants (dyes or pigments), resin carriers, solvent systems, and functional additives, they offer high adhesion, weather resistance, and rapid drying, while being compatible with high-speed industrial printing equipment?making them a critical consumable in the industrial digital printing value chain.

Key upstream raw materials include high-purity organic pigments, nano-scale dispersants, acrylic and polyurethane resins, alcohol-ether solvents, and functional additive systems. Downstream, the supply network encompasses packaging printers, label and advertising inkjet service providers, textile digital printing facilities, and building material decoration printers. Future growth lies in upgrading toward eco-friendly water-based formulations, high-solid/low-VOC systems, and functional inkjet materials (such as conductive, antibacterial, and UV-curable inks). Demand growth is driven primarily by the digital transformation of packaging, the expansion of personalized printing, and the widespread adoption of on-demand production models fueled by Industry 4.0; the market is characterized by a landscape of rapid growth alongside high

technical barriers to entry.
