Abstracts

According to our (Global Info Research) latest study, the global Inkjet Thermal Print Head (TPH) market size was valued at US\$ 727 million in 2025 and is forecast to a readjusted size of US\$ 946 million by 2032 with a CAGR of 3.9% during review period.

Inkjet Thermal Print Head is a core inkjet printing component that rapidly heats ink through micro heating elements to generate bubble pressure, ejecting droplets through nozzles onto the surface of a substrate. It typically integrates a nozzle array, heating resistors, ink channels, drive circuits and packaging structures, and is used to print text, images, barcodes, QR codes and variable information. It is widely applied in office printing, consumer printing, packaging coding, industrial marking and compact digital inkjet systems. The unit price of Inkjet Thermal Print Head (TPH) typically ranges from tens to hundreds of dollars, with industry gross margins between 30% and 50%.

The upstream supply chain of Inkjet Thermal Print Heads mainly includes silicon based chips, thin film resistive materials, nozzle plates, driver ICs, flexible printed circuits, packaging materials, inks, filtration components, adhesives, as well as semiconductor processing, micro and nano fabrication, precision packaging and inspection equipment. The midstream consists of inkjet thermal print head design and manufacturing companies, with key processes including heating resistor design, nozzle array fabrication, ink channel design, drive control development, material compatibility validation, packaging, testing and reliability evaluation. The downstream mainly serves OEMs of office printers, home printers, label printers, packaging coding equipment, industrial marking systems and portable inkjet terminals, with end applications covering office printing, home printing, food and beverage packaging, pharmaceutical packaging, logistics labels, retail marking and light industrial production line coding.

The Inkjet Thermal Print Head market is mainly driven by demand from office printing, consumer printing, industrial marking, packaging coding and short run variable information printing. Compared with piezoelectric inkjet print heads, inkjet thermal print heads generally feature a compact structure, lower manufacturing cost, high integration and strong mass production capability, making them suitable for standardized applications with mature ink systems and high cost sensitivity. With growing demand for packaging traceability, personalized printing and compact industrial inkjet systems, these products are expected to maintain a stable application base in office and light industrial printing, while still facing competition from piezoelectric print heads in high viscosity inks, functional material deposition and heavy duty continuous industrial printing.
