Abstracts

According to our (Global Info Research) latest study, the global Inlaying Machine market size was valued at USD 40 million in 2023 and is forecast to a readjusted size of USD 43 million by 2030 with a CAGR of 1.1% during review period.

Inlaying Machine, or a mounting press machine, is a device used to encapsulate samples for metallographic preparation.

Metallographic specimens are typically 'mounted' using a hot compression thermosetting resin. In the past, phenolic thermosetting resins have been used, but modern epoxy is becoming more popular because reduced shrinkage during curing results in a better mount with superior edge retention. A typical mounting cycle will compress the specimen and mounting media to 4,000 psi (28 MPa) and heat to a temperature of 350 °F (177 °C). When specimens are very sensitive to temperature, 'cold mounts' may be made with a two-part epoxy resin. Mounting a specimen provides a safe, standardized, and ergonomic way by which to hold a sample during the grinding and polishing operations.

United States is the largest Inlaying Machine market with about 31% market share. Europe is follower, accounting for about 26% market share.

The key players are Struers, Buehler, LECO, Presi, Allied High Tech, Laizhou Weiye, ATM GmbH, Plusover, BROTH LAB, Shanghai Minxin, WHW etc. Top 3 companies occupied about 36% market share.
