According to our (Global Info Research) latest study, the global Inline Metrology market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Inline and offline measurements refer to two different types of measurements. Inline Measurements are commonly referred to as automatic measurements made during a process. Offline measurements, on the other hand, are often referred to as manual measurements. The difference between the two occurs during the measurement process (line). If the measurements are included in the line then the process is considered "inline". If it's separate from the line then it's considered "offline". For off line measurements products are removed from production, inspected and returned to production, discarded or saved as inspection samples.
