The inner hole grooving tool is a tool specially used to process grooves in the inner hole of the workpiece. Its main function is to cut grooves of various shapes in the inner hole of the workpiece, such as undercut grooves, sealing grooves, circlip grooves, etc. Its main function is to cut grooves of various shapes in the inner hole of the workpiece, such as backing grooves, sealing grooves, retaining ring grooves, etc. The internal groove cutter has a compact design and can achieve efficient and precise machining in the limited space of the inner hole, meeting strict dimensional tolerances and surface quality requirements. Common machining methods include turning, boring or milling, which are suitable for CNC machine tools or special equipment. When selecting an internal groove cutter, it is necessary to reasonably match the inner hole diameter, groove size and machining material, and optimize the cutting parameters to extend the tool life and ensure the machining quality. With the rapid development of automated machining technology, internal groove cutters are constantly improving in terms of versatility, high precision and durability, providing efficient and reliable solutions for modern manufacturing.
