## Abstracts

The global Inner Layer Photoresist Ink market size is expected to reach \$ 320 million by 2032, rising at a market growth of 8.0% CAGR during the forecast period (2026-2032).

Inner Layer Photoresist Ink is a photosensitive material used for transferring inner layer circuit patterns in the manufacturing process of PCB multilayer boards. It forms fine circuit patterns on the surface of copper foil through exposure and development technology, and is an important component of PCB photoresist system. It mainly includes liquid photoresist and dry film photoresist, and is widely used in high-precision circuit processing scenarios such as ordinary PCB, HDI board, and IC carrier board. In 2025, global Inner Layer Photoresist Ink production reached approximately 32,546 Tons, with an average global market price of around US\$ 5,567 per ton.

The annual production capacity of Inner Layer Photoresist Ink is 50000 tons, and the overall industry gross profit margin is between 25% and 45%, with ordinary products accounting for about 20% to 30%, HDI accounting for about 30% to 40%, and IC carrier boards and high-end LDI products reaching 40% to 55%; The upstream is mainly in the field of chemical raw materials, including fine chemical suppliers such as resins, monomers, photoinitiators, solvents, and functional additives. The midstream is photoresist and PCB ink production enterprises, and the downstream is PCB manufacturers, ultimately applied in consumer electronics, automotive electronics, communication equipment, and semiconductor packaging; In the cost structure, raw material costs account for about 55% -70%, with resin and photosensitive systems as the core cost items, manufacturing expenses accounting for 15% -25%, including production equipment depreciation and energy consumption, labor and management expenses accounting for 10% -15%, and R&D and formula optimization investment accounting for about 5% -10%. The overall cost is greatly affected by fluctuations in raw

material prices and technological requirements.
