According to our (Global Info Research) latest study, the global Inorganic Color Pigments market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Inorganic pigments are obtained from mixed metal oxides and are produced by a high temperature calcinations process. These pigments are not affected y strong acids, base and oxidizing agents. Also inorganic pigments are non-migratory, do not bleed and are non-warping. Most inorganic pigments can withstand various temperatures and bad climatic conditions; they are heat resistant, have resistance to other chemicals and are easy to disperse.

The key drivers for the inorganic pigment market include rapid growth in urbanization, the paints and the coatings market, the construction agency, the building material and plastic industry. The demand for inorganic pigments is expected to be the highest in developing countries.
