Abstracts

According to the source of the feed mycotoxin binder and modifier market, inorganic sources have a larger market share in 2018. Feed mycotoxins binders come mainly from inorganic sources such as aluminum, sodium, potassium and calcium silicates. In the feed industry, clay products include bentonite, zeolite, montmorillonite, and HSCAS (sodium calcium aluminosilicate hydrate), activated carbon, and synthetic polymers for binding aflatoxins. These products have many advantages over organic modifiers, such as lower prices and ease of storage and handling, which has led to an increased preference for these products over organic mycotoxins.

According to our (Global Info Research) latest study, the global Inorganic Feed Mycotoxins Binders and Modifiers market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
