According to our (Global Info Research) latest study, the global Inorganic Fiber Aerogel Insulation Material market size was valued at US\$ 967 million in 2025 and is forecast to a readjusted size of US\$ 1294 million by 2032 with a CAGR of 4.3% during review period.

Inorganic fiber aerogel insulation material is a composite material prepared through a specific composite process, where inorganic fibers serve as the reinforcing phase and are combined with an aerogel matrix. Aerogel is a highly dispersed solid material consisting of a nanoporous network structure formed by the aggregation of colloidal particles or polymer molecules, with the pores filled with a gaseous dispersed medium. Inorganic fibers are uniformly dispersed within the aerogel matrix, serving to support and reinforce it, thereby enhancing the overall performance of the material.
