Abstracts

Fluoride is an inorganic, monatomic anion with the chemical formula F^- , whose salts are typically white or colorless. Fluoride salts typically have distinctive bitter tastes, and are odorless. Its salts and minerals are important chemical reagents and industrial chemicals, mainly used in the production of hydrogen fluoride for fluorocarbons. Fluoride is classified as a weak base since it only partially associates in solution, but concentrated fluoride is corrosive and can attack the skin.

Scope of the Report:

This report focuses on the Inorganic Fluorides in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Fluoride is added to municipal water supplies and dental products, such as toothpaste, to prevent or reduce tooth decay. People are primarily exposed to fluoride from drinking water and use of fluoridated dental products, with water fluoridation representing 30% to 70% of a typical individual's total exposure. Fluoride is also used in consumer products, such as cleaning supplies, and industrial applications. Workers in some occupations may be exposed to fluoride by inhaling fluoride compounds at their place of employment.

The worldwide market for Inorganic Fluorides is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
