Abstracts

According to our (Global Info Research) latest study, the global Inorganic Insulated Flexible Fire-Resistant Cable market size was valued at US\$ 1877 million in 2024 and is forecast to a readjusted size of USD 2494 million by 2031 with a CAGR of 4.1% during review period.

Inorganic insulated flexible fire-resistant cable is composed of copper core, inorganic insulation material, inorganic filling material, metal sheath and other main structures. In addition to good conductivity, mechanical and physical properties, and fire resistance, it also has good non flammability. This type of cable not only ensures fire power supply during the duration of a fire, but also does not delay combustion or produce smoke. GB 50016-2014 'Code for Fire Protection Design of Buildings' clearly requires that fire protection distribution lines should be laid separately from other distribution lines in different cable wells and trenches; When it is difficult to lay it in the same cable well or trench, it should be arranged on both sides of the cable well or trench separately, and the fire protection distribution line should use mineral insulated non combustible cables. This cable is suitable for power transmission and distribution in elevators, fire control centers, fire-fighting facilities, and densely populated areas with AC voltage of 0.6/1kV and below.
