## Abstracts

The global Inorganic Peroxide market size is expected to reach \$ 4560 million by 2032, rising at a market growth of 4.8% CAGR during the forecast period (2026-2032).

Inorganic peroxides are a class of oxygen-rich compounds containing peroxide bonds ( $\text{O-O}$ ), typically formed between metals or nonmetals and oxygen, such as hydrogen peroxide ( $\text{H}_2\text{O}_2$ ), sodium peroxide ( $\text{Na}_2\text{O}_2$ ), and barium peroxide ( $\text{BaO}_2$ ); they are strong oxidizing agents widely used in bleaching, disinfection, environmental treatment, chemical synthesis, and energy-related applications. The supply chain begins upstream with basic raw materials including hydrogen, oxygen, alkali metals (sodium, potassium), alkaline earth metals (barium), and industrial chemicals derived from air separation and electrolysis processes; midstream production involves catalytic oxidation (e.g., anthraquinone process for  $\text{H}_2\text{O}_2$ ), controlled reaction of metals with oxygen, and stabilization/formulation into liquid or solid peroxide products; downstream, inorganic peroxides are distributed to industries such as pulp & paper, textiles, water treatment, electronics cleaning, mining, and chemical manufacturing, with logistics requiring strict safety handling due to their reactive and decomposable nature. In 2025, global Inorganic Peroxide output was about 4 million tons with 5 million tons of capacity, average prices of USD 700-1,300 per ton, and gross margins around 21%.

This report studies the global Inorganic Peroxide production, demand, key manufacturers, and key regions.
