An inorganic plaster accelerator is a chemical additive used to accelerate the setting and hardening process of gypsum, belonging to the category of inorganic compounds. It can significantly shorten the time from mixing gypsum with water to obtaining the final strength, improving the production efficiency of gypsum products. In fields such as construction, decoration, and model making, by adding an inorganic plaster accelerator, gypsum can reach a usable state more quickly, and it can also improve certain properties of gypsum products to a certain extent, such as early - stage strength and surface smoothness.
