According to our (Global Info Research) latest study, the global Inorganic Silica Gel for Catalyst Carrier market size was valued at US\$ 118 million in 2025 and is forecast to a readjusted size of US\$ 156 million by 2032 with a CAGR of 4.1% during review period.

Inorganic Silica Gel for Catalyst Carrier refers to a high-surface-area form of silica (SiO_2) specifically designed to act as a support material for catalysts in chemical reactions. It plays a crucial role in heterogeneous catalysis, where the catalyst is in a different phase than the reactants.

Silica gel has a high specific surface area, and the size of the specific surface area can be controlled during production, making it very suitable for catalysts and catalyst carriers. Therefore, silica gel is usually used as a dehumidifying desiccant, water absorbent, moisture-proof agent, catalyst carrier, filler, etc. With the development of modern petrochemical, fine chemical, environmental protection, biochemistry and other technologies, inorganic silica gel is also gradually developing in the direction of refinement. Silica gel is classified according to shape, pore size, purpose, adsorption characteristics, etc., with different varieties and different applications.

From the perspective of product market application, inorganic silica gel for catalyst carriers is widely used in catalyst formulations in the fields of petrochemical, fine chemical, environmental protection, pharmaceuticals, etc., and the market foundation is solid. Among them, petrochemical is an important downstream application. In 2024, 75.34% of China's inorganic silica gel for catalyst carriers will be mainly used in the petrochemical industry, with sales reaching 15,188 tons.
