Inorganic terrazzo is a type of decorative flooring made from a combination of natural stone aggregates, such as marble, quartz, or granite, set in an inorganic binder like cement or epoxy resin. This flooring material is known for its durability, versatility, and aesthetic appeal, with a smooth, polished finish. The aggregates are mixed into the binder and then ground, polished, and sealed to create a seamless, durable surface. Inorganic terrazzo is commonly used in high-traffic areas, such as commercial spaces, public buildings, and residential floors, offering long-lasting performance and a wide range of design possibilities.
