According to our (Global Info Research) latest study, the global Inorganic Thickener market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

An inorganic thickener is a type of thickening agent that is derived from minerals such as clay, silica, and metal oxides. These thickeners work by forming a three-dimensional network of particles that trap and hold water or other liquids, thereby increasing the viscosity and stability of the product. Inorganic thickeners are commonly used in the manufacturing of paints, coatings, adhesives, and other products where high viscosity and stability are required. They are preferred over organic thickeners in certain applications because of their chemical and thermal stability and their resistance to microbial growth.
