## Abstracts

According to our (Global Info Research) latest study, the global Inorganic Zinc Coatings market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The zinc coatings have a significant amount of metallic zinc dust mixed with the binder. Inorganic Zinc Coatings offer galvanic protection to the steel surfaces. The inorganic coatings have zinc silicate binder unlike organic zinc coatings, which uses organic resins such as butyl, epoxy or urethane. The inorganic zinc coatings exhibit good mechanical properties and impact resistance, high heat resistance and radiation resistance.

Inorganic zinc coatings are used in a wide range of high performance systems and as top coat in the maintenance and construction of bridges, tanks, pipeline, offshore and structural steel work. Inorganic zinc coatings provide excellent compatibility with other coatings such as silicones, acrylics and epoxies.
