## Abstracts

According to our (Global Info Research) latest study, the global InP Lasers market size was valued at US\$ 109 million in 2025 and is forecast to a readjusted size of US\$ 218 million by 2032 with a CAGR of 10.5% during review period.

Indium Phosphide (InP) is used to produce efficient lasers, sensitive photodetectors and modulators in the wavelength window typically used for telecommunications, i.e., 1550 nm wavelengths, as it is a direct bandgap III-V compound semiconductor material. Indium phosphide (InP) is a binary semiconductor composed of indium and phosphorus. It has a face-centered cubic ('zincblende') crystal structure, identical to that of GaAs and most of the III-V semiconductors. When design and fabrication is optimised InP lasers provide high spectral purity and optical power, over a wide temperature range.

Global key players of InP Lasers include MACOM, Lumentum, Coherent, etc. The top three players hold a share over 68%. Americas is the largest market, and has a share about 39%, followed by Asia-Pacific and Europe with share 31% and 28%, separately. In terms of product type, 1300nm-1600nm is the largest segment, occupied for a share of 77%. In terms of application, Information and Communication has a share about 73 percent.
