Indium Phosphide (InP) is used to produce efficient lasers, sensitive photodetectors and modulators in the wavelength window typically used for telecommunications, i.e., 1550 nm wavelengths, as it is a direct bandgap III-V compound semiconductor material. Indium phosphide (InP) is a binary semiconductor composed of indium and phosphorus. It has a face-centered cubic ('zincblende') crystal structure, identical to that of GaAs and most of the III-V semiconductors. When design and fabrication is optimised InP lasers provide high spectral purity and optical power, over a wide temperature range.

According to our (Global Info Research) latest study, the global InP Lasers market size was valued at US$ 90.8 million in 2023 and is forecast to a readjusted size of USD 181 million by 2030 with a CAGR of 10.5% during review period.

Global key players of InP Lasers include MACOM, Lumentum, Coherent, etc. The top three players hold a share over 68%. Americas is the largest market, and has a share about 39%, followed by Asia-Pacific and Europe with share 31% and 28%, separately. In terms of product type, 1300nm-1600nm is the largest segment, occupied for a share of 77%. In terms of application, Information and Communication has a share about 73 percent.
