Abstracts

According to our (Global Info Research) latest study, the global InP OMVPE Epitaxial Wafers market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

InP OMVPE Epitaxial Wafers use indium phosphide as the substrate, through metal organic chemical vapor deposition technology, ultrapure gas is injected into the reactor and finely measured to deposit very thin atomic layers on semiconductor wafers. Surface reactions of organic compounds or metal organics and hydrides containing the desired chemical elements create conditions for crystal growth to form epitaxy of materials and compound semiconductors.

Following a strong growth of 26.2 percent in the year 2021, WSTS revised it down to a single digit growth for the worldwide semiconductor market in 2022 with a total size of US\$580 billion, up 4.4 percent. WSTS lowered growth estimation as inflation rises and end markets seeing weaker demand, especially those exposed to consumer spending. While some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.8 percent, Sensors with 16.3 percent, and Logic with 14.5 percent growth. Memory declined with 12.6 percent year over year. In 2022, all geographical regions showed double-digit growth except Asia Pacific. The largest region, Asia Pacific, declined 2.0 percent. Sales in the Americas were US\$142.1 billion, up 17.0% year-on-year, sales in Europe were US\$53.8 billion, up 12.6% year-on-year, and sales in Japan were US\$48.1 billion, up 10.0% year-on-year. However, sales in the largest Asia-Pacific region were US\$336.2 billion, down 2.0% year-on-year.
