The global Insect-Based Cat Food market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Insects are becoming an increasingly important alternative source of protein due to the rising cost of traditional animal protein, food insecurity, climate change and global population growth. Insects are considered animals and are a complete animal protein, containing all nine essential amino acids. According to the United Nations Food and Agriculture Organization, 'the nutritional value of insects is no different from that of other meat sources such as chicken, beef, pork and fish.'

Insect-based cat food is rich in protein from the insect black soldier fly, a high-quality protein source that is completely free from growth hormones and antibiotics. The insects are rich in protein and essential amino acids, just like cat would get from traditional meat, and has high digestibility. On top of that, insects also provide healthy fatty acids and minerals. Insect-based cat food also provides prebiotics and dietary fiber, for a healthy intestinal flora.

This report studies the global Insect-Based Cat Food production, demand, key manufacturers, and key regions.
