According to our (Global Info Research) latest study, the global Insect Drying Equipment market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The insect dryer dries sequentially from the outside to the inside. During the preheating period, the surface of the insect can be dried at low temperature first, and then the temperature gradually increases. The gradual drying from the outside to the inside is almost simultaneous drying. The surface is dried first and then it can form a barrier to lock the moisture and nutrients inside the insect from being completely evaporated, and the surface is crispy and the inside is juicy.
