## Abstracts

The global Insecticide for Stored Grain market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Ongoing market pressure in the post-harvest stage and increasing focus on reducing post-harvest losses are the major factors driving the market growth. The lack of storage facilities on many small-scale farms in various countries makes it impossible to store surplus grains, leading to increased post-harvest losses. In addition, governments around the world are paying more and more attention to dealing with the looming grain storage crisis and increasing investment in the construction of high-tech granaries. This may increase the demand for insect grain protectants. The global pandemic has led to increased grain inventories and storage due to supply chain disruptions. To protect stored grain from pests, farmers have an increasing demand for stored grain pesticides.

Pesticides are chemicals used to control pests and are often highly toxic. Cereal pesticides refer to pesticides specifically designed to control pests stored in grains. These pesticides can kill or repel pests in grains and protect the quality and safety of grains.

This report studies the global Insecticide for Stored Grain production, demand, key manufacturers, and key regions.
