Abstracts

The global Insertable Heart Monitors market size is expected to reach \$ 823.5 million by 2029, rising at a market growth of 6.9% CAGR during the forecast period (2023-2029).

Implantable cardiac monitors (ICM) are small electrophysiology (EP) devices that used for long-term monitoring of a patient's heart electrical activity to detect arrhythmias. The technology can eliminate the need for a bulky external Holter monitor that requires wire leads attached to the patient. ICMs can be inserted under the skin during an office visit and record cardiac data continuously for up to 4.5 years.

This report studies the global Insertable Heart Monitors production, demand, key manufacturers, and key regions.
