An insertion vortex flow meter is a device used to measure the flow rate of liquids, gases, or steam. It operates by inserting a probe into the pipeline to detect the K_rm²n vortex frequency generated as the fluid flows past. This type of flow meter is widely used in industrial process control and energy management due to its simple structure, ease of maintenance, and installation without interrupting the flow. Insertion vortex flow meters are suitable for large-diameter pipelines and high-flow applications, offering high accuracy and stability, as well as the ability to withstand high-temperature and high-pressure conditions.
