An Inset polarizer means that all liquid crystals have two polarizing light sheets immediately before and after the liquid crystal glass, forming a liquid crystal sheet with a total thickness of about 1mm.

Inset Polarisers are optical components used in various photonics and optics applications. The demand for precision optical components can impact the market. These components can be used in telecommunications and data centers for polarization control and signal manipulation. Inset Polarisers are integrated into various optical systems, including lasers, optical sensors, and imaging devices. Research institutions and laboratories use Inset Polarisers in experiments and prototyping optical systems. Manufacturers might innovate in terms of performance, design, and manufacturing techniques to meet the evolving needs of the photonics industry. Polarisation control is important in various industrial applications, such as laser processing, spectroscopy, and sensing.
