An industrial robot is a robot system used for manufacturing. Industrial robots are automated, programmable and capable of movement on two or more axes. Typical applications of robots include welding, painting, assembly, pick and place for printed circuit boards, packaging and labeling, palletizing, product inspection, and testing; all accomplished with high endurance, speed, and precision.

Scope of the Report:

This report focuses on the Inspection Robots in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Visual capability in modern robots has evolved from the earlier version of generic robots. The earlier robotic systems demanded customization as each part was expected to operate in an exact area at a particular time due to lack of robotic vision. However, with advances in technology cameras, sensors and software have enabled the robots to detect movement with precision. Therefore inspection robot, now, is able to accomplish inspection tasks that are difficult for human.

The worldwide market for Inspection Robots is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
